

Renovated Museum Secured with Xonar 942

Xonar 942 implemented within Grade I Listed heritage property to create secure and controlled environment.

Located in the heart of Winchester, this 19th Century Grade I heritage property was originally built to celebrate and collate classic Greek sculptures. As time went on and the collection amassed, the museum urgently required a renovation to correctly house the rich collection.

Security was therefore an important element of the renovation. Xonar 942 offered a high-performance, retrofit solution to provide a secure and controlled environment.

Secured to LPS 1175

Offering a certified solution to low- and medium-risk applications, the Xonar 942 Bolt On Security Shutter provides mitigation of forced entry via bodily force.

Certified to LPS 1175 Issue 7: SR2, Xonar 942 has undergone extensive testing to achieve certification, accredited by the LPCB. Xonar 942 also eliminates the requirement for auxiliary locking mechanisms anywhere on the shutter.

Why use a Xonar 942 on a Heritage property?

Heritage properties, in particular museums and galleries, must adhere to the restrictions of the **Government Indemnity Scheme (GIS)**.

Offering an alternative to the cost of commercial insurance, GIS specifies a minimum standard of physical security dependent on variables such as location, application style and contents. More information available on request.
