

smart-thinking shutter solutions

ABOUT VORTEX

Designed to offer vastly reduced roll sizes, Vortex represents an ingenious roller shutter system that combines architectural enhancement and engineering excellence. Vortex offers vulnerable properties with small headroom requirements an alternative to bulky security shutters.

INNOVATIVE LATH DESIGN

Vortex features an innovative lath design, with extruded aluminium guides and end retention pins. The shutter is then finished in a polymer coating for a **sleek and quiet operation.**

- Reduces headroom requirements without compromising on the standard of security
- Perforated and punched options available to offer ventilation through free open area
- Vortex Guarantee: 12 month guarantee on faulty materials and workmanship

DISCOVER THE VORTEX KEY FEATURES

Internal and external fit

Available for face fit internally and externally to suit all application requirements

Aluminium construction

Constructed from high grade aluminium, Vortex is stronger than typical security shutters

Architectural finish

Reduced hood box requirements minimise the visual impact the shutter has on the property

Complete security

End retention pins ensures complete protection against forced entry and lifting of the curtain

VORTEX SHUTTERS ROLL 40 - 50% SMALLER THAN STANDARD

Catering for all properties from retail façades to residential garage doors, Vortex requires the smallest headroom requirements compared to any standard security shutter on the market.

Using varying lath sizes to reduce the overall roll size, the installation space required for the headbox is **radically reduced**.
