

STRENGTH THROUGH INNOVATION

RAL COLOUR CHART

A vast range of RAL colours are available as standard for all shutters, shown in the swatches below.

Designed for external use, polyester powder coating offers the widest choice of colours available. The characteristic feature of polyester powder coatings is the excellent colour and gloss retention in outdoor exposure, ideal where UV stability and weather resistance is required. Standard coatings are to a 25 micron thickness, with a marine grade thickness available for coastal areas.

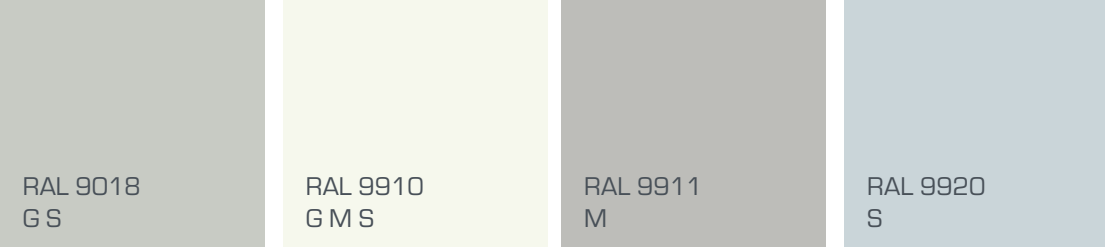

An anti-graffiti option is available on most colours. Please note all colours shown are as a guide only, colours displayed will vary depending on your computer screen.

M = Matt Finish
G = Gloss Finish
S = Satin Finish
